

The Climate Registry

Greenhouse Gas Accounting Software

Understanding greenhouse gas (GHG) emissions data and policy can be tricky, but The Climate Registry (TCR) is here to help!

The Climate Registry Information System (CRIS)

The Climate Registry Information System (CRIS) is an easy-to-use, web-based system for measuring, reporting, and verifying your organization's carbon footprint. Each year, CRIS is audited and updated to reflect changes in international best-practice and the most current emission factors available. Promote your sustainability achievements knowing that your emissions data is the highest quality available.

- *“CRIS helps provide useful reporting metrics. The City of LA asks us for fuel use data so that the city can calculate city-wide emissions. We’re able to send over completed emissions data instead. It’s always good to have accurate metrics.”* –Lisa Wunder, Port of LA
- *“It is so easy, streamlined and easy to follow. It is a huge improvement over the last version, like night & day. Faster, easier to use, and the reports are great.”* –Liz Muller, Virgin America Consultant
- *“CRIS is straightforward and I appreciate how it helps us to determine whether or not we’re using the correct EFs to calculate our emissions.”* –Jeff Robertson, USANA Health Sciences

CRIS makes it easy for you to turn your sustainability goals into a reality because you can only manage what you measure.

To learn more about CRIS, TCR Membership, and other available services, visit the “Programs and Services” section of our website or contact us at help@theclimateregistry.org to set up a demo today!

CRIS features

DATA UPLOAD & AGGREGATION

- direct spreadsheet upload
- Energy Star Portfolio Manager integration
- data aggregation at facility and entity level

CALCULATION & REDUCTIONS

- emissions calculation by activity data, fuel quantities, or precalculated information
- up-to-date and region specific Emission Factors audited by TCR
- metric tons of GHG and CO2 equivalent
- carbon offsets, RECs, and reductions can be directly applied

ANALYTICS & REPORTING

- evaluate emissions by industry, time period, geographic area, and/or scope
- 20+ reports available numerically or as graphics
- easy export in Excel or PDF formats

QUALITY CONTROL & VERIFICATION

- automatic quality assurance flags data entry errors or omissions
- incorporated alerts remind users about required information
- third-party verifiers can complete verification directly in the reporting platform

USER SYSTEMS & WORKFLOW

- allows for multiple users and levels of permission
- dashboard features easy access and emission totals
- hands-on help desk support

Need a feature not mentioned above? No problem! TCR also offers platform customization. Our in-house development team will work with you to offer personalization. Rest assured knowing you will have an easy-to-use platform, supporting the most high-quality data.
