

## Webinar

### Community Choice Aggregators Reporting to The Climate Registry

As Community Choice Aggregation programs continue to increase renewable energy procurement, the opportunity to quantify the associated greenhouse gas emissions, or lack thereof, is also on the rise. This public webinar will discuss the value of CCAs measuring and disclosing GHG emissions at The Climate Registry, as well as the process and benefits of developing utility-specific delivery metrics.

September 25  
11:00 am PDT

Guest Speakers  
Sonoma Clean Power  
Silicon Valley Clean Energy

*"It is imperative to our business that we follow carbon accounting best practices. Given our mission to provide carbon-free electricity, we rely on an accurate greenhouse gas emissions inventory assembled in compliance with international reporting standards. We appreciate that TCR keeps up with evolving state and federal policies."*

Don Bray, Director of Account Services and Community Relations, Silicon Valley Clean Energy

## About The Climate Registry

TCR is making global warming history. As the only voluntary carbon reporting program that is backed by U.S. states and Canadian provinces, our mission is to empower our generation to reduce its carbon footprint by helping organizations measure, track and manage their GHG emission inventories.
